Appendix B: Research Materials

A prolific artist, writer, designer, and political activist, William Morris remains remarkably powerful and relevant today. But how do you teach someone like Morris who made significant contributions to several different fields of study? And how, within the exigencies of the modern educational system, can teachers capture the interdisciplinary spirit of Morris, whose various contributions hang so curiously together? Teaching William Morris gathers together the work of nineteen Morris scholars from a variety of fields, offering a wide array of perspectives on the challenges and the rewards of teaching William Morris. Across this book's five sections—"Pasts and Presents," "Political Contexts," "Literature," "Art and Design," and "Digital Humanities"—readers will learn the history of Morris's place in the modern curriculum, the current state of the field for teaching Morris's work today, and how this pedagogical effort is reaching well beyond the college classroom.

Final Report from the NRC Committee on the Review of the Louisiana Coastal Protection and Restoration (LACPR) Program

Subsistence Hunting of Migratory Birds in Alaska and Canada, Draft Environmental Assessment (EA) B1; Final Environmental Assessment (EA)

Route 297 Reconstruction (Bridge St), Solvay to Geddes, Onondaga County

The U.S. Army Corps of Engineers released the Louisiana Coastal Protection and Restoration (LACPR) draft final technical report in March, 2009. In response to federal legislation, the Corps had to analyze hurricane protection, and design and present a full range of measures to protect against a storm equivalent to a category 5 hurricane. The request included measures for flood control, coastal restoration, and hurricane protection, and stipulated close coordination with the State of Louisiana and its appropriate agencies. This is the second and final report from the National Research Council (NRC) Committee on the Review of the Louisiana Coastal Protection and Restoration (LACPR) Program. The committee was charged to review two draft reports from the LACPR team and to assess the hurricane risk reduction framework, alternatives for flood control, storm protection, coastal restoration, and risk analysis. This report presents this committee's review and advice for improvements of the LACPR March 2009 draft final technical report.
